

[260621] 작업 진행현황(박성은)

☼ 상태	완료
☰ 태그	
🕒 생성 일시	June 21, 2026 10:00 PM

Key changes:

- Added POST /api/diagnosis/analyze/ for image upload → backend quality check/
preprocess → one multimodal AI diagnosis call → JSON schema validation → toneKey
normalization → fixed palette lookup → result save.
- Added canonical 32 toneKey handling, diagnosis JSON schema, OpenAI-compatible AI
adapter, image quality service, palette service, and async GenAI makeup job
service
under Lumiere/back/diagnosis/services/workflow.py.
- Added PersonalColorPalette master palette DB model, MakeupGenerationJob,
result
snapshot fields, migration Lumiere/back/diagnosis/
migrations/0005_diagnosisresult_diagnosis_json_and_more.py.
- Added seed command with complete summer_cool_mute data and
placeholders for
remaining toneKeys: Lumiere/back/diagnosis/management/commands/
seed_personal_color_palettes.py.
- Updated result serialization so frontend gets palette, palette_status, analysis,
evidence, cautions, makeup_color_guide, and GenAI status.
- Updated upload UI to actually select/preview/upload images.
- Updated result UI to display fixed palette data, fallback palette warning, styling
keywords, product tone range, and GenAI loading/complete state with polling.

Verification passed:

- D:\python_study\copy\venv\Scripts\python.exe manage.py test diagnosis
- D:\python_study\copy\venv\Scripts\python.exe manage.py makemigrations diagnosis
--check --dry-run
- npm run build

Operational notes:

- Use the project venv Python. The default Anaconda python currently fails Django checks because its Pillow install is broken.
- Before running the new API locally:
 - D:\python_study\copy\venv\Scripts\python.exe manage.py migrate
 - D:\python_study\copy\venv\Scripts\python.exe manage.py seed_personal_color_palettes
- Required env for real AI:
 - OPENAI_API_KEY
 - optional OPENAI_DIAGNOSIS_MODEL
 - optional OPENAI_IMAGE_MODEL
- For local mock diagnosis/image generation:
 - OPENAI_DIAGNOSIS MOCK=1
 - OPENAI_IMAGE_GENERATION MOCK=1
